Psychiatric problems frequently occur in children and adolescents. Epidemiological methods are used in child psychiatric research to study the occurrence of psychiatric disorders, test causal hypotheses and investigate the developmental trajectories.

In this course epidemiological research and methods in Child and Adolescent Psychiatry will be discussed in depth. Using an interactive approach most material is presented in seminar format. A wide range of topics will be covered ranging from descriptive epidemiology, major research milestones, current methodological challenges to a future research agenda for Child and Adolescent Psychiatry. These themes are linked to selected major disorders. Other seminars will cover selected research topics. Students are engaged to evaluate and design different research projects. Particular emphasis lies on study designs with a developmental, multi-informant, or multi-method approach.

Upon completion of the course the student will be able to:

1. **Critically interpret the literature in the field of Child and Adolescent Psychiatry.**
2. **Evaluate critically major child psychiatric research themes such as nosology, genetics, brain imaging or multi-informant approach.**
3. **Design and analyze a Child Psychiatric epidemiological study.**

This course is intended primarily for doctoral and master students with interest in developmental or psychiatric research. However, the course should be of interest for any student whose career might involve behavioral or emotional problems in children or psychiatric problems in adults.

Course Prerequisite(s): EPI200 or EPI201 or EPI208 or EPI500 or ID 201 or EPI505 or ID538 or ID207. Concurrency is allowed for all courses.

Epidemiology 230 Section: 1

Religion, Well-being, and Public Health (190297)

Tyler VanderWeele

2019 Spring (1.25 Credits) **Schedule:** MTWRF 0945 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 20

The course will give an overview of the current state of research on the relationship between religion and health. Over the past three decades, the research literature documenting this relationship has grown dramatically. Religious participation has been shown to have protective effects on all-cause mortality, mental health, cardiovascular health, cancer survival, and many other health outcomes. The course will review the research that has been done in this area, discuss some of the measurement and methodological challenges faced by this research, and explore future research directions in religion and health as well as questions of relevance to public health. Specific topics will include religion participation and longevity, religion and mental health, religious communities and health, and religion and spirituality in end of life care. Attention will be given throughout to questions of measurement, study design, and methodology, and the challenges in conducting rigorous research in this area.

Course Prerequisite(s): ID538 or ID200 or [(BIO200 or BIO201 or BIO202&203 or BIO206&207/8/9 or PHS2000A) and (EPI201 or EPI208 or EPI500 or EPI505 or ID201)]; may not be taken concurrently

Requirements: **Pre-requiesites: ID538 or ID200 or [(BIO200 or BIO201 or BIO202&203 or BIO206&207/8/9 or PHS2000A) and (EPI201 or EPI208 or EPI500 or**

EPI505 or ID201)]; may not be taken concurrently.

Readings in Global Health (190298)

Instructor TBD

2016 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 28

Global Health has emerged as a distinctive field in the last two decades, replacing older conceptions of International Health, Geographic Medicine, and Tropical Medicine. While many of the core concerns of Global Health build on prior work in infectious diseases and maternal and child health, new pandemics of chronic diseases are a substantial and growing burden in an aging and urbanized poipulations worldwide. New global threats, such as the health effects of climate change, have emerged. Fresh approaches to research on infectious and non-communicable disease, as well as on health services are now required. Health Systems are pressed to design appropriate architectures for disease prevention and to enable affordable and accessible treatment. A globalized world casts new light on the training and deployment of the health workforce and compels fresh thinking about global governance for disease control and promotion of health.

Readings in Global Health (190298)

David Hunter

2017 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 30

Global Health has emerged as a distinctive field in the last two decades, replacing older conceptions of

International Health, Geographic Medicine, and Tropical Medicine. While many of the core concerns of Global Health build on prior work in infectious diseases and maternal and child health, new pandemics of chronic diseases are a substantial and growing burden in an aging and urbanized populations worldwide. New global threats, such as the health effects of climate change, have emerged. Fresh approaches to research on infectious and non-communicable disease, as well as on health services are now required. Health Systems are pressed to design appropriate architectures for disease prevention and to enable affordable and accessible treatment. A globalized world casts new light on the training and deployment of the health workforce and compels fresh thinking about global governance for disease control and promotion of health.

In this course, learners will hear from leading experts as they engage with current issues and challenges in global health. The course will examine the global response to diseases, such as the recent Ebola outbreak. The backbone of this learning experience is a set of 18 reviews, co-edited by David Hunter and Harvey Fineberg, published in The New England Journal of Medicine (NEJM). The combined reviews constitute an up-to-date survey of global health topics from authoritative leaders in the field, covering disease patterns and predictions, infectious and non-communicable diseases, and health systems and institutional responses.

Participants will read the reviews, hear from the authors through a series of interviews, and engage with the content and one another through assessments and discussion questions.

Research Synthesis & Meta-Analysis (190299)

Stefania Papatheodorou

2021 Spring (2.5 Credits) **Schedule:** W 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 70

Concerned with the explosion of biological data for etiologic inquiry and the use of existing data to inform public health decision-making, the course focuses on research synthesis and meta-analysis. This course provides an introduction to the rationale, methods, and implications for conducting a synthesis of research findings. You will receive step-by-step guidance on how to conduct and evaluate systematic reviews that may also include a meta-analysis. The course will introduce research databases, reference management software, pooled estimates and sources of heterogeneity and bias, and practical applications.

Course Activities: Students will learn the principles of a systematic review, to use existing meta-analysis software to apply principles outlined in the course on example data sets, and, on a topic of their choice, to conduct a critical review or meta-analysis that appropriately weights effect estimates in each study, assesses uncertainty, and incorporates other kinds of scientific data in the overall analysis.

No auditing. This course may only be taken for credit.

Requirements: **Course Restricted to HSPH Degree Students and PHD-PHS students who have completed at least 1 semester and have not taken BST 225**

Research Synthesis & Meta-Analysis (190299)

Stefania Papatheodorou

2018 Spring (2.5 Credits) **Schedule:** W 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 60

Concerned with the explosion of biological data for etiologic inquiry and the use of existing data to inform public health decision making, the course focuses on research synthesis and meta-analysis. We will review the principles and methods for combining epidemiology studies and introduce how other types of scientific evidence, such as toxicology or mode-of-action data, can be incorporated using weight-of- evidence analyses. This course will emphasize the use of critical reviews and meta-analysis to explore data and identify sources of variation among studies.

Course Activities: Students will learn the principles of a systematic review, to use existing meta-analysis software to apply principles outlined in the course on example data sets, and, on a topic of their choice, to conduct a critical review or meta-analysis that appropriately weights effect estimates in each study, assesses uncertainty, and incorporates other kinds of scientific data in the overall analysis.

Course Prerequisites: ID538 or [(BIO200 or ID201 or ID200 or BIO201 or BIO202&203 or BIO206&207/8/9) and (EPI200 or EPI201 or EPI208 or EPI500 or ID201 or EPI505)]; may not be taken concurrently.

Course is mutually exclusive with BIO234. You may not take both this course and BIO234.
No auditing. This course may only be taken for credit.

Epidemiologic Methods in Health Services Research (190301)

Julie Lauffenburger

2021 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 32

This course is designed to introduce students to the application of standard and advanced epidemiologic methods to health services research (HSR).Students will learn to recognize the principles of epidemiology in HSR and applications in comparative effectiveness and patient-centered outcomes research, and understand the terminology and methods specific in the field. Threats to validity, including confounding and , selection bias , and methods for their control will be discussed in a variety of settings, especially in studies that analyze electronic databases, such as administrative claims and electronic health record data. Topics include health policy and program evaluation, time-series designs, prediction modeling, evaluation of cost and quality outcomes, patientreported outcomes, risk adjustment, pragmatic randomized trials, and research embedded within health care systems. The course is focused primarily on practical applications of these approaches. The clinical, economic, policy, and public health impact of HSR will also be discussed.

Course prerequisites: ID200 or ID201 or [(BIO200 or BST201 or BST202&203 or BST206&207/8/9 or PHS2000A) or(EPI200 or EPI201 or EPI208 or EPI500 or EPI505)]; may be taken concurrently.

Requirements: **Pre-requisites: (ID200 or BIO200 or ID201 or BST201 or BST202&203 or BST206&207/8/9) AND (ID200 or EPI200 or EPI201 or EPI208 or EPI500 or ID201 or EPI505); may be taken concurrently. non-HSPH students must request instructor permission**

The course is designed to introduce students to the application of standard epidemiologic methods to Health Services Research. Students will learn to recognize the principles of Epidemiology in Health Services Research and understand the terminology and methods specific to the field. Threats to validity including confounding, selection bias, information bias, and methods for their control will be discussed in a variety of settings, both in the U.S. and around the world, emphasizing practical considerations. Lectures will include recent newsworthy case studies and examples from the literature. Topics include strategic planning, quality control and management, risk adjustment, benchmarking, outcomes and comparative effectiveness research, geographic information systems, and health program evaluation. The clinical, economic, and polcy impact of health serves research will be discussed.
Course prerequisites:(BIO200 or ID200 or BIO201 or BIO202&203 or BIO206&207/8/9) AND (EPI200 or EPI201 or EPI208 or EPI500 or EPI505)

Instructor TBD

2016 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 37

This course is designed to introduce students to the application of standard and advanced epidemiologic methods to health services research (HSR), comparative effectiveness research (CER), and patient-centered outcomes research (PCOR). Students will learn to recognize the principles of epidemiology in HSR, CER, and PCOR and understand the terminology and methods specific to the field. Threats to validity including confounding, selection bias, information bias, and methods for their control will be discussed in a variety of settings, emphasizing practical considerations. Topics include health policy and program evaluation, risk adjustment, benchmarking, patient-reported outcomes, evaluation of cost outcomes, designed delay and pragmatic randomized trials, and research embedded within health care systems. The clinical, economic, policy, and public health impact of HSR, CER, and PCOR will be discussed.
Course prerequisites:(ID200 or BIO200 or ID201 or BIO201 or BIO202&203 or BIO206&207/8/9) AND (ID200 or EPI200 or EPI201 or EPI208 or EPI500 or ID201 or EPI505)

2020 Summer (5 Credits) **Schedule:** MTWRF 0945 AM - 1115 AM
MTWRF 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 65

This course examines some features of study design, but is primarily focused on analytic issues encountered in clinical research. These include techniques for stratified analysis, regression modeling, propensity scores, matching and recursive partitioning. Emphasis is placed on the use of these techniques for the control of confounding and the development of clinical prediction rules. The focus of this course is on applications and interpretations of results with limited introduction to theory that underlies these techniques.

Course Activities: Seminars are scheduled during regular class time. Students must develop a written summary of the analysis of a clinical data set based on the results of daily computer exercises

Requirements: **Prerequisties: (EPI 200 or EPI201 or EPI208 or EPI500 or ID 207) AND (BST201 or BST202&203 or BST206&207 or BST206&208 or ID 207)**

Restricted to:
Summer only MPH-CLE
Summer only MPH-QM
Summer only SM1-EPI
Academic year MPH-CLE
Academic year SM1-EPI

Biomarkers in Epidemiology Research (190305)

Shelley Tworoger

A. Eliassen

Mingyang Song

2019 Spring (1.25 Credits) **Schedule:** M 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 48

The purpose of this course is to provide students with an overview of the issues pertinent to the collection, measurement, and statistical analysis of biomarker data. The course aims to address general principles within the context of relevant examples. Topics to be covered include study-design considerations, sample storage, sources of laboratory variability, assay evolution and use of pooled samples, among others.

Course Activities: Class discussion, homework, final project.
Course Prerequisites: EPI200 or EPI201 or EPI208 or EPI505 or ID201; may not be taken concurrently.

Daniel Singer

Heather Baer

E. Orav

Earl Cook

2017 Fall (1.25 Credits) **Schedule:** F 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 65

EPI242, SECTION 1 Daniel Singer (Primary Instructor)
This seminar serves as a forum for students' clinical epidemiologic research. In the process, students are exposed to a variety of research designs, analytic strategies, and content areas. There is active class discussion. Faculty emphasize methodologic issues pertinent to the class research presentation.
Course Activities: Student presentations or written assignment
Course Note: Must register in each appropriate semester; separate grade given at the end of each semester. Instructor approval required for all NON-MPH CLE students.

EPI242, SECTION 2 Heather Baer (Primary Instructor)
This seminar is an alternative to the EPI242 Section 1 seminar on Friday mornings. This section is reserved for MPH-CLE students who are unable to attend the Friday morning EPI242 seminar on a regular basis, due

to clinical responsibilities or other unavoidable conflicts. Students in Section 2 must attend another work-in-progress research seminar in their department or division (subject to approval by the Instructor), and they must present their own work and get feedback from faculty and colleagues. The goal is to expose students to a variety of research designs, analytic strategies, and content areas.

Course Activities: Students must participate in regular research seminars, work on their own research projects, and present their work.
Course Note: You must register in each appropriate semester (need 2 semesters total); separate grade given at the end of each semester. Instructor approval required.Please contact the Instrucotr at hbaer@partners.org for details about how to request approval.

EPI-242, SECTION 1
This seminar serves as a forum for students' clinical epidemiologic research. In the process, students are exposed to a variety of research designs, analytic strategies, and content areas. There is active class discussion. Faculty emphasize methodologic issues pertinent to the class research presentation.
Course Activities: Student presentations or written assignment
Course Note: Must register in each appropriate semester; separate grade given at the end of each semester. Instructor approval required for all NON-MPH CLE students.

EPI-242, SECTION 2
This seminar serves as a forum for students' clinical epidemiologic research. In the process, students are exposed to a variety of research designs, analytic strategies, and content areas. Faculty emphasize pertinent methodologic issues.

Course Activities: Students must participate in regular research seminars, work on their own research projects, and present their work.
Course Note: Must register in each appropriate semester; separate grade given at the end of each semester. Instructor approval required.

<u>EPI242, SECTION 1</u> Daniel Singer (Primary Instructor)
This seminar serves as a forum for students' clinical epidemiologic research. In the process, students are exposed to a variety of research designs, analytic strategies, and content areas. There is active class discussion. Faculty emphasize methodologic issues pertinent to the class research presentation.
Course Activities: Student presentations or written assignment
Course Note: Must register in each appropriate semester; separate grade given at the end of each semester. Instructor approval required for all NON-MPH CLE students.

<u>EPI242, SECTION 2</u> Heather Baer (Primary Instructor)
This seminar is an alternative to the EPI242 Section 1 seminar on Friday mornings. This section is reserved for MPH-CLE students who are unable to attend the Friday morning EPI242 seminar on a regular basis, due to clinical responsibilities. Students in Section 2 must regularly attend another research seminar in their department or division (subject to approval by the Instructor), and they must present their own work and

get feedback from faculty and colleagues. The goal is to expose students to a variety of research designs, analytic strategies, and content areas.

Course Activities: Students must participate in regular research seminars, work on their own research projects, and present their work.
Course Note: You must register in each appropriate semester (need 2 semesters total); separate grade given at the end of each semester. Instructor approval required.

Cardiovascular Epidemiology II - Reading the Literature (190309)

Instructor TBD

2014 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 12

This course builds upon concepts and methods learned in cardiovascular Epidemiology I (taught in Fall), with a focus on reading and evolution of scientific literature. Coursework will be taught in a seminar-style format, with a focus each class on reading and evaluating relevant original published manuscripts in cardiovascular epidemiology. Students will actively take part in the biweekly manuscript critiques, including leading of at least one critique during the course. The focus will be on development of the student's ability to consider and evaluate scientific investigations in term of methods, strengths and limitation (e.g. related to study design, classification and exposure and outcome, bias/confounding, generalizability, etc) and implications.
Course Prerequisite(s): EPI223

Applied Biomarkers in Cancer Epidemiology (190310)

A. Eliassen

Eva Schernhammer

2017 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 25

The focus of this course is on application and interpretation of cancer studies using biomarkers. Topics include biomarkers of exposure, biomarkers related to metabolism/activation and other biological pathways, intermediate/surrogate endpoints, markers of early cancer detection and prognosis. Examples are discussed in each topic to demonstrate different issues in the interpretation of results. Class will be split into one hour lectures and one hour discussions of assigned readings. Having taken EPI240 is encouraged but not required.

Course Activities: Class discussion, one oral presentation, homeworkassignments, one written assignment.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Classification	Odd Year Class

Epidemiologic Methods Development - Past and Present (190311)

Murray Mittleman

2020 Fall (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 20

This course aims to provide students with a strong foundation in understanding the theoretical basis of currently used epidemiologic methods and also to help students acquire an understanding of the process of developing new approaches. The course will review the theoretical basis of modern epidemiology by reviewing landmark papers in the development of epidemiologic methods. Students will review classic papers that introduced important theoretical and methodological advances in the field.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | PHD PHS EPI

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Pre-requisites: EPI289**

Students outside of HSPH must request instructor permission to enroll in this course

Epidemiology 247 Section: 01

Epidemiologic Methods Development - Past and Present (190311)

Murray Mittleman

2017 Fall (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 32

This course aims to provide students with a strong foundation in understanding the theoretical basis of currently used epidemiologic methods and also to help students acquire an understanding of the process of developing new approaches. The course will review the theoretical basis of modern epidemiology by reviewing landmark papers in the development of epidemiologic methods. Students will review classic papers that introduced important theoretical and methodological advances in the field.

Course Prerequisites: EPI289 required

Requirements: **HSPH: EPI247**

Additional Course Attributes:

Molecular Biology for Epidemiologists (190312)

Instructor TBD

2012 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 35

Molecular Biology for Epidemiologists, taught by Dr. Immaculata De Vivo, offers an overview of fundamental molecular biology concepts and techniques commonly used in the laboratory and in epidemiological research. During the term, we will cover a broad range of topics including, but not limited to, the mechanisms and regulatory processes involved in different steps of the central dogma of molecular biology, how cellular mechanisms go awry and how these cells can be repaired, Mendelian and non-Mendelian genetics, meiosis, mitosis, and both novel and classical molecular biology tools. This course will be of most interest to those who have not taken a recent college-level course in molecular biology, or equivalent.

Effectiveness Research with Longitudinal Healthcare Databases (190316)

Sebastian Schneeweiss

Michael Fischer

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 70

Large longitudinal healthcare databases have become important tools for studying the utilization patterns and clinical effectiveness of medical products and interventions in a wide variety of care settings and for evaluating the impact of clinical programs or policy changes. This course will prepare students to identify and use longitudinal databases in their own research. Strengths and limitations of large longitudinal healthcare databases that are commonly used for effectiveness research will be considered. Special attention will be devoted to nationally representative databases and local electronic medical record data sources that are readily available to new investigators.

The centerpiece of the course is a student project which includes conducting a pilot feasibility analysis and developing a study protocol. Students will work with a large longitudinal claims database and with easy-to-use statistical software to develop inclusion and exclusion criteria, produce population descriptive, and implement follow-up models and riskadjustment methodologies resulting in multivariate adjusted effect estimates. Practical issues in obtaining, linking, and analyzing large databases will be emphasized throughout the course, and key analytic issues will be addressed, including design considerations and multivariate risk-adjustment.

The course does not require specific programming skills. It is focused on analytic principles and their application to database research rather than mathematical details. It requires an understanding of epidemiologic study designs and typical analysis strategies.

Requirements: **Prerequisites: ID201 or ID207 or [(BST201/202&3/206&7/8) and (EPI200/201/208/500/505)]. Concurrent enrollment is permitted. Course Restricted: HSPH degree or PCE students.**

Additional Course Attributes:

Michael Fischer

2017 Summer (2.5 Credits) **Schedule:** MTWRF 0330 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 70

Large longitudinal healthcare databases have become important tools for studying the utilization patterns and clinical effectiveness of medical products and interventions in a wide variety of care settings and for evaluating the impact of clinical programs or policy changes. This course will prepare students to identify and use longitudinal databases in their own research.

Strengths and limitations of large longitudinal healthcare databases that are commonly used for research will be considered. Special attention will be devoted to nationally representative databases that are critical for comparative effectiveness research and local electronic medical record data sources that are readily available to new investigators.

Practical issues in obtaining, linking, and analyzing large databases will be emphasized throughout the course, and key analytic issues will be addressed, including design considerations and multivariate risk-adjustment. Students will evaluate published database studies, complete programming exercises with statistical software and hands-on access to a large longitudinal database, and prepare a proposal for analyzing a specific research question using a large healthcare database.

The course focuses on analytic principles and their application to database research. It requires an understanding of epidemiologic study designs (cohort, case-control) and typical analysis strategies (logistic regression, Cox regression, propensity score analysis)

Enrollment for this course is limited. All non-degree summer session students must apply to take this course via the limited enrollment survey. All other students (non-degree PCE and degree students) must meet the prerequisites to enroll.

Course Pre-requisites: ID200 or ID201 or ID207 or [(BIO200 or BIO201 or BIO202&203 or BIO206&207/208/209) and (EPI200 EPI201 or EPI208 or EPI505)]

Class Notes: **Enrollment Note: Enrollment for this course is limited. All non-degree summer session students must apply to take this course via the limited enrollment survey. All other students (non-degree PCE and degree students) must meet the prerequisites to enroll.**

2021 Spring (1.25 Credits) **Schedule:** R 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 24

This course will cover epidemiologic concepts and methods related to diseases of aging as well as general health issues in older persons. Topics will include the epidemiology of Alzheimer's Disease; pharmacoepidemiology in the older persons; methodologic dilemmas in such research; as well as others.

Additional Course Attributes:

Attribute	Value(s)
HSPH: Classification	Even Year Class
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Course Category	Category 3: Essential Course

Epidemiology 254 Section: 1

The Epidemiology of Aging (190317)

Francine Grodstein

2017 Spring (1.25 Credits) **Schedule:** R 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 24

This course will cover epidemiologic concepts and methods related to diseases of aging as well as general health issues in older persons. Topics will include the epidemiology of Alzheimer's Disease; pharmacoepidemiology in the older persons; methodologic dilemmas in such research; as well as others.

Epidemiology of HIV, Part I: Etiology, Natural History & Transmission (190318)

Kunjal Patel

Krystal Cantos

2021 Spring (2.5 Credits) **Schedule:** F 0200 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 40

This course is designed to introduce students to the epidemiology of HIV infection. It is designed for those students with a keen interest in both HIV/AIDS and epidemiologic methods. This course will survey state-of-the-art knowledge of the epidemiology of HIV infection and will emphasize epidemiologic principles and methods; including studies of the etiology of AIDS, estimation of the incidence and prevalence of HIV and AIDS, natural history and survival. The use of appropriate study designs and potential sources of bias will be discussed, with a focus on observational designs. This course will provide the student with experience in the critical review of epidemiologic studies in this area.

Course Activities: Assignments will consist of three study critiques and weekly discussion board posts.

Prerequisite(s): ID200 or ID201 or EPI200 or EPI201 or EPI208 or EPI500 or EPI505 or ID538. Courses may not be taken concurrently.

Requirements: **Pre-requisites: ID200 or ID201 or EPI200 or EPI201 or EPI208 or EPI500 or EPI505 or ID538.**
Courses may not be taken concurrently.

Hot Topics in Cancer Epidemiology (190320)

Kathryn Penney

2020 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 17

This course is an advanced seminar in current cancer research. The goal of this course is to present an integrated view of current issues central to cancer epidemiology. We will build on knowledge gained in other courses and cover cancer sites not typically discussed in other courses. The course will take a global perspective on cancer epidemiology, and will emphasize the integration of knowledge from other courses. The course is intended for graduate students who have a research focus in, or a strong interest in cancer epidemiology and cancer prevention. Meetings are expected to be participatory discussions about the current status and future directions for research in the selected areas. Previous enrollment in EPI213 Cancer Epidemiology is recommended.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Epidemics and Other Crises (216378)

David Shumway Jones

2020 Fall (5 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

As demonstrated all too well by COVID-19, epidemics continue to challenge human populations, causing substantial mortality and provoking dramatic societal responses. At the same time, there are many other health significant threats (e.g., cigarettes, air pollution, the climate crisis) that generate little concern or attention. This graduate seminar will examine the historical literature on epidemics and other health threats to explore the nature of the threats, how societies have responded, and how epidemics can be valuable tools for social analysis. It will also explore the ways in which these histories can inform our understanding of medicine and public health. What roles can historians play when these crises strike? Can we distill useful lessons from history?

Mathematical Modeling of Infectious Diseases (190321)

Marc Lipsitch

2020 Spring (2.5 Credits) **Schedule:** WF 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 30

This course will cover selected topics and techniques in the use of dynamical models to study the transmission dynamics of infectious diseases. Class sessions will primarily consist of lectures and demonstrations of modeling techniques. Techniques will include design and construction of appropriate differential equation models, equilibrium and stability analysis, parameter estimation from epidemiological data, determination and interpretation of the basic reprodutive number of an infection, techniques for sensitivity analysis, and critique of model assumptions. Specific topics will include the use of age-seroprevalence data, the effects of population heterogeneity on transmission, stochastic models and the use of models for pathogens with multiple strains. This course is designed for students with a basic understanding of mathematical modeling concepts who want to develop models for their own work.

Course Note: Previous course in calculus is required
Course Prerequisite(s): EPI501; may be taken concurrently.

Requirements: **HSPH: EPI260**

Reproductive and Perinatal Epidemiology I (190322)

Carmen Messerlian

2020 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 30

This course provides master and doctoral students the opportunity to gain a background in reproductive and perinatal epidemiology and understand the unique methodological challenges to the field. The course will cover a range of substantive topics including: the biology of human reproduction; an evolutionary perspective of pregnancy; fertility and time to pregnancy; infertility and its treatment; complications in pregnancy; adverse perinatal outcomes such as preterm birth; fetal exposures and windows of vulnerability; sexual health and induced abortion; gynecological cancers; and women's health across the lifecourse. Methodologic complexities of studying these areas will be highlighted through critical reading and discussion of published literature. Measurement of these outcomes, problems of study design, and sources of biases will be discussed.

Requirements: **Pre-requisites: ID200 or EPI200 or EPI201 or EPI208 or EPI500 or ID201 or EPI505 or ID538 (all courses may be taken concurrently)**

Students outside of HSPH must request instructor permission to enroll in this course

Epidemiological Research in Obstetrics and Gynecology (190322)

Kathryn Terry

Leslie Farland

2017 Fall (2.5 Credits) **Schedule:** TR 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 30

This course will provide an overview of the current research in reproductive epidemiology. The course will cover epidemiologic research in the areas of contraception, infertility, pregnancy, menopause, and both benign and malignant gynecological conditions. Students will be introduced to methods used in reproductive epidemiology and learn how to critically evaluate results from epidemiologic studies in obstetrics and gynecology. An overview of the clinical and physiological underpinnings of particular topical areas will be provided.

Course Prerequisites: ID200 or ID201 or EPI200 or EPI201 or EPI208 or EPI500 or EPI505 or ID538 (all courses may be taken concurrently)

Requirements: **HSPH: EPI269**

Students will be introduced to methods used in reproductive epidemiology and learn how to critically evaluate results from epidemiologic studies in obstetrics and gynecology. An overview of the clinical and physiological underpinnings of particular topical areas will be provided.
Course Prerequisite(s): EPI200 or EPI201 or EPI208 or EPI500 or EPI505 or ID538

Additional Course Attributes:

Attribute	Value(s)

Epidemiology 269 Section: 1

Epidemiological Research in Obstetrics and Gynecology (190322)

Instructor TBD

2014 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

This course will provide an overview of the current research in reproductive epidemiology. The course will cover epidemiologic research in the areas of contraception, infertility, pregnancy, menopause, and both benign and malignant gynecological conditions. Students will be introduced to methods used in reproductive epidemiology and learn how to critically evaluate results from epidemiologic studies in obstetrics and gynecology. An overview of the clinical and physiological underpinnings of particular topical areas will be provided.

Course Prerequisites: ID200 or EPI200 or EPI201 or EPI208 or EPI500 or ID201 or EPI505 or ID538 (all courses may be taken concurrently)

Additional Course Attributes:

Attribute	Value(s)

Epidemiology 269 Section: 1

Reproductive and Perinatal Epidemiology II: Advanced Methods (190323)

Tamarra James-Todd

2020 Spring (1.25 Credits) **Schedule:** M 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 15

This course is an advanced seminar in reproductive epidemiologic methods. It is intended for graduate students who have a research focus, or a strong interest, in reproductive epidemiology. The course will cover methodological challenges in analyzing and interpreting epidemiologic data on reproductive outcomes including fertility, fetal development, complications of pregnancy, pregnancy outcomes, the controversial role of birthweight and perinatal status in determining short-term and long-term health outcomes of offspring, and the implications of reproductive health status for chronic disease in women. The course will be led by Drs. Rich-Edwards and Hacker, with faculty joining to present methodological cases. Students must read the case materials before class and be prepared for active class discussion. Pass/fail grading will be based on class participation.
Course Prerequisite(s): EPI269; may not be taken concurrently.

Requirements: **Pre-requisite(s): EPI269; may not be taken concurrently.**

Students outside of HSPH must request instructor permission to enroll in this course

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Category	Category 3: Essential Course
HSPH: Classification	Odd Year Class
All: Cross Reg Availability	Available for Harvard Cross Registration

Propensity Score Analysis: Theoretical & Practical Considerations (190324)

Tobias Kurth

John Seeger

2021 Spring (1.25 Credits) **Schedule:** MTWRF 0800 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 64

This course introduces basic and advanced theory underlying propensity score analyses and provides practical insights into the conduct of studies employing the method. Course readings will include propensity score theory as well as applications. Lectures are complemented by computer lab sessions devoted to the mechanics of estimating and using the propensity score as a tool to control for confounding in observational research. Students should have knowledge in multivariable modeling approaches. A course project will involve the application of propensity scores to a data set or the review of a related, published paper.

Course Activities: Lectures, readings, homeworks, computer labs, participation, project.
Course Prerequisite(s): EPI204 or EPI236 or EPI 522 or BST210 or BST213; may not be taken concurrently.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | PhD PHS EPI, EPI SM1, EPI SM2

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 11/12/2020 11:00AM – 12/1/2020 11:59PM

Wave 2 | 12/2/2020 12:00AM – 12/3/2020 11:59PM

Wave 3 | 12/4/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Prerequisite: EPI204 or EPI236 or EPI 522 or BST210 or BST213; may not be taken concurrently.**
Students outside of HSPH must request instructor permission to enroll in this course

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Category	Category 3: Essential Course
HSPH: Course Material Fee Tier	< $25
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	NO

Sebastian Schneeweiss

Joshua Gagne

2020 Fall (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 36

Using contemporary examples and with the participation of prominent researchers in

pharmacoepidemiology, this course addresses a range of study designs and analytic techniques for non-experimental studies on the utilization, safety, and effectiveness of pharmaceuticals. During the course students will plan, implement, and analyze a safety or effectiveness study in a large electronic healthcare database using an easy-to-use software platform. Faculty will lead in-class discussions on design options, analysis strategies, and sensitivity analyses for confounding and other biases. This course is intended for individuals who plan to conduct non-randomized studies using electronic healthcare databases in academia, the pharmaceutical/biotech industry, pharmaceutical benefits management, national regulatory bodies, or other research organizations. No programming experience is required.

Course activities: Class discussion, reading homework, active learning, class project analyzing healthcare claims data using a specialized analysis platform.

Course notes: familiarity with epidemiology study designs and data analysis approaches is expected.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Instructor Permissions: None **Enrollment Cap:** 20

Using current examples and with the participation of active researchers in pharmacoepidemiology, this course addresses a range of study designs and analytic techniques for observational studies on the utilization, safety, and effectiveness of pharmaceuticals. Students will develop an understanding of how to plan, implement, analyze, and criticize pharmacoepidemiologic studies. Original research will be presented by principal investigators, followed by intensive discussions on design options, analytic strategies, and sensitivity analyses of confounding and misclassification bias. Lectures will provide methodological background and will cover applied issues typically encountered in pharmacoepidemiology. This course is

intended primarily for graduate students considering a career in the pharmaceutical/biotech industry, pharmaceutical benefits management, or in national regulatory bodies.

Course activities: Class discussion, reading homework, individual class presentations.

Course notes: Familiarity with logistic regression and survival analysis is expected.
Course Prerequisite(s): (BIO210 or BIO223) and EPI221.

Additional Course Attributes:

Introduction to Machine Learning and Risk Prediction (190331)

Nancy Cook
Earl Cook

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 73

This course will present an introduction to the methods of data mining and predictive modeling, with

applications to both genetic and clinical data. Basic concepts and philosophy of supervised and unsupervised data mining as well as appropriate applications will be discussed. Topics covered will include multiple comparisons adjustment, cluster analysis, principal component analysis, and predictive model building through logistic regression, classification and regression trees (CART), multivariate adaptive splines (MARS), neural networks, random forests, and bagging and boosting.

Students enrolled in the MPH-EPI program have priority enrollment in this course. If room is available, summer-only students and academic year students will be enrolled into the course from the waitlist. Summer only students may waitlist themselves without receiving instructor permission. All academic year students must request instructor permission prior to adding themselves to the waitlist.

Meeting Note: This is an online course with pre-recorded lectures and will not have specific meeting times

Prerequisite: EPI 522 or EPI 236 or BST 213 or BST 215 or permission of the instructor

Requirements: **EPI 522 or EPI 236 or BST 213 or BST 215 or permission of the instructor**
Student must be in the MPH-EPI program or a summer-only degree program. Other students can enroll with permission of the instructor.

Epidemiology 289 Section: 1

Epidemiologic Methods III: Models for Causal Inference (190332)

Barbra Dickerman

2021 Spring (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 70

Causal Inference is a fundamental component of epidemiologic research. EPI289 describes models for causal inference, their application to epidemiologic data, and the assumptions required to endow the parameter estimates with a causal interpretation. The course introduces outcome regression, propensity score methods, the parametric g-formula, inverse probability weighting of marginal structural models, g-estimation of nested structural models, and instrumental variable methods. Each week students are asked to analyze the same data using a different method.

EPI289 is designed to be taken after EPI201/EPI202 and before EPI204 and EPI207. Epidemiologic concepts and methods studied in EPI201/202 will be reformulated within a modeling framework in EPI289. This is the first course in the sequence of EPI core courses on modeling (EPI289, EPI204, EPI207). EPI289 focuses on time-fixed dichotomous exposures and time-fixed dichotomous and continuous outcomes. Continuous exposures and failure time outcomes (survival analysis) will be discussed in EPI204, and time-varying exposures in EPI207. Familiarity with either SAS or R language is strongly recommended.

Course Prerequisite(s): EPI201 and EPI202; may not be taken concurrently.

Class Notes: **Please note: Students must be enrolled in both EPI 289 (lecture) and an EPI 289 Lab to complete this enrollment. If you are enrolled in EPI 289 and not enrolled in a corresponding lab , you will be dropped from EPI 289 when the enrollment deadline has passed. Students on the waitlist are not officially enrolled in a lab.**

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | EPI SM1, SM2, PHD PHS EPI

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Pre-requisites: EPI201 and EPI202; may not be taken concurrently. Students outside of HSPH must request instructor permission to enroll in this course**

2019 Spring (2.5 Credits) **Schedule:** W 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 12

Causal Inference is a fundamental component of epidemiologic research. EPI289 describes models for causal inference, their application to epidemiologic data, and the assumptions required to endow the parameter estimates with a causal interpretation. The course introduces outcome regression, propensity score methods, the parametric g-formula, inverse probability weighting of marginal structural models, g-estimation of nested structural models, and instrumental variable methods. Each week students are asked to analyze the same data using a different method.

EPI289 is designed to be taken after EPI201/EPI202 and before EPI204 and EPI207. Epidemiologic concepts and methods studied in EPI201/202 will be reformulated within a modeling framework in EPI289. This is the first course in the sequence of EPI core courses on modeling (EPI289, EPI204, EPI207). EPI289 focuses on time-fixed dichotomous exposures and time-fixed dichotomous and continuous outcomes. Continuous exposures and failure time outcomes (survival analysis) will be discussed in EPI204, and time-varying exposures in EPI207. Familiarity with either SAS or R language is strongly recommended.

Course Prerequisite(s): EPI201 and EPI202; may not be taken concurrently.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | EPI SM2, EPI SD, PhD PHS

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/10/2019 01:00PM – 1/15/2019 11:59PM

Wave 2 | 1/16/2019 12:00AM – 1/17/2019 11:59PM

Wave 3 | 1/18/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: EPI289**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	NO
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed

Epidemiology 289 Section: L2

Epidemiologic Methods III: Models for Causal Inference (190332)

Miguel Hernan

2018 Spring (2.5 Credits) **Schedule:** W 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 13

Epidemiologic Methods III: Models for Causal Inference (213564)

Barbra Dickerman

2021 Spring (0 Credits) **Schedule:** W 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 13

Causal Inference is a fundamental component of epidemiologic research. EPI289 describes models for causal inference, their application to epidemiologic data, and the assumptions required to endow the parameter estimates with a causal interpretation. The course introduces outcome regression, propensity score methods, the parametric g-formula, inverse probability weighting of marginal structural models, g-estimation of nested structural models, and instrumental variable methods. Each week students are asked to analyze the same data using a different method.

EPI289 is designed to be taken after EPI201/EPI202 and before EPI204 and EPI207. Epidemiologic concepts and methods studied in EPI201/202 will be reformulated within a modeling framework in EPI289. This is the first course in the sequence of EPI core courses on modeling (EPI289, EPI204, EPI207). EPI289 focuses on time-fixed dichotomous exposures and time-fixed dichotomous and continuous outcomes. Continuous exposures and failure time outcomes (survival analysis) will be discussed in EPI204, and time-varying exposures in EPI207. Familiarity with either SAS or R language is strongly recommended.

Course Prerequisite(s): EPI201 and EPI202; may not be taken concurrently.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | EPI SM1, SM2, PHD PHS EPI

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Pre-requisites: EPI201 and EPI202; may not be taken concurrently. Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)

Deep Learning for Biomedical Data (214460)

Kun-Hsing Yu

Andrew Beam

2021 Spring (2.5 Credits) **Schedule:** F 0800 AM - 0859 AM

Instructor Permissions: None **Enrollment Cap:** 20

Deep learning is a type of machine learning method that employs many layers of data representations to capture the characteristics of the input data at different levels. It is inspired by the organization of neurons in organisms and has shown superior performance in image classification, natural language processing, and predicting of gene functions. In this class, we will introduce the basic concepts of deep neural networks and GPU computing, discuss convolutional neural networks and recurrent neural networks structures, and examine a few biomedical applications. Students are expected to be familiar with linear algebra and machine learning and will participate in a group deep learning project.

Learning Goals

- Understand the state of the art deep learning algorithms

- Understand the pros and cons of different approaches

- Implement deep machine learning applications using cloud GPU servers

- Become familiar with ways to optimize deep learning methods for biomedical applications

- Appreciate the strengths and limitations of deep learning applications

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Deep Learning for Biomedical Data (214460)

Kun-Hsing Yu

Andrew Beam

2021 Spring (2.5 Credits) **Schedule:** F 0200 PM - 0259 PM

Instructor Permissions: None **Enrollment Cap:** 20

Deep learning is a type of machine learning method that employs many layers of data representations to capture the characteristics of the input data at different levels. It is inspired by the organization of neurons in organisms and has shown superior performance in image classification, natural language processing, and predicting of gene functions. In this class, we will introduce the basic concepts of deep neural networks and GPU computing, discuss convolutional neural networks and recurrent neural networks structures, and examine a few biomedical applications. Students are expected to be familiar with linear algebra and machine learning and will participate in a group deep learning project.

Learning Goals

- Understand the state of the art deep learning algorithms

- Understand the pros and cons of different approaches

- Implement deep machine learning applications using cloud GPU servers

- Become familiar with ways to optimize deep learning methods for biomedical applications

- Appreciate the strengths and limitations of deep learning applications

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Epidemiology 293 Section: 1

Analysis of Genetic Association Studies (190335)

Liming Liang

2021 Spring (2.5 Credits)

Schedule: MTWF 0200 PM - 0515 PM
TW 0900 AM - 1115 AM
R 0200 PM - 0400 PM
W 0900 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap: 30

At the end of this course students will grasp Concept and Theory, Methods and Software Tools needed to critically evaluate and conduct genetic and genomic association studies in unrelated individuals and family samples, including: basic molecular and population genetics, marker selection algorithms, haplotyping, multiple comparisons issues, population stratification, genome-wide association studies, genotype imputation, gene-gene and gene-environment interaction, analysis of microarray data (including gene expression, methylation data analysis, eQTL mapping), next-generation sequencing data analysis and genetics simulation studies. Useful software tools will be introduced and practiced in labs and projects. Students interested in methodology development will find interesting research topics to pursue further. Students interested in application will learn cutting-edge methods and tools for their ongoing projects. Course materials will be updated according to the fast-growing areas of genomics and other omics studies.

Course note: Familiarity with R and UNIX computing environment are highly recommended. Source codes for all lab projects will be provided. Students are encouraged to discuss course prerequisites with the instructor.

Course Prerequisite(s): BST201 and (BST210 or BST213 or EPI204) and (ID200 or EPI200 or EPI201 or EPI505 or EPI500 or ID201); may not be taken concurrently.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | SM2 CBQG

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 11/12/2020 11:00AM – 12/1/2020 11:59PM

Wave 2 | 12/2/2020 12:00AM – 12/3/2020 11:59PM

Wave 3 | 12/4/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Pre-requisites: (BST201) and (BST210 or BST213 or EPI204) and (ID200 or EPI200 or EPI201 or EPI505 or ID201); may not be taken concurrently. Students outside of HSPH must request instructor permission to enroll in this course**

Pharmacoepidemiology: Intro (190337)

Instructor TBD

2012 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

This is an introductory course on pharmacoepidemiology. How the principles of modern epidemiology methods are used to evaluate the safety, effectiveness, and utilization patterns of drugs, vaccines, and medical devices will be discussed. Examples of descriptive epidemiology studies, cohort studies, case control studies, and intervention studies will be drawn from recent literature to illustrate the application of relevant methods and the challenges in drug safety assessment. Drug safety assessment from the pharmaceutical and biotechnology industry perspective and the regulatory perspective will be discussed. Practical issues such as data sources, ethical principles and advanced methodologic topics, such as confounding by indication and misclassification and the analytic methods to address them will be briefly introduced.

Course Activities: Written and oral group projects, individual class presentations, class discussion.

Course Note: Recommended for students interested in a general overview of pharmacoepidemiology. Credits cannot be given for students who have taken EPI221 (or vice versa.) A minimum enrollment of 8 students is required for course to be offered.
Course Prerequisite(s):EPI200 or EPI201 or EPI208 or EPI500 or EPI505 or ID538
